- Software Engineering Experience is a MUST
- NodeJS installed
- Python Installed
- Claude Desktop Installed
- Cursor Installed

Description

This course contains the use of artificial intelligence :)

Please note that this is not a course for beginners. This course assumes that you have a background in software engineering and are proficient in Python. I will be using Cursor IDE but you can use any editor you'd like since we only use basic feature of the IDE like debugging and

What is the Model Context Protocol?

The Model Context Protocol (MCP) is an open-source standard, introduced by Anthropic in 2024, that allows AI models to seamlessly connect with external data sources, tools, and software systems

Architecture Components

- **MCP Hosts:** Programs like Claude Desktop, Cursor, Windsurf, or AI tools that want to access data through MCP
- **MCP Clients:** Protocol clients that maintain 1:1 connections with servers (Content ETA April)
- **MCP Servers:** Lightweight programs that each expose specific capabilities through the standardized Model Context Protocol
- **Local Data Sources:** Your computer's files, databases, and services that MCP servers can securely access (Content ETA End of March)
- **Remote Services:** External systems available over the internet (e.g., through APIs) that MCP servers can connect to (Content ETA End of March)
- Authentication

Key Capabilities

- **Resources:** Components that expose data and content from your servers to LLMs
- **Prompts:** Functionality to create reusable prompt templates and workflows
- **Tools:** Features that enable LLMs to perform actions through your server
- **Sampling:** Capability that lets your servers request completions from LLMs
- **Transports:** MCP's communication mechanism between clients and servers

Topic Covered:

- MCP + Agent Security best practices
- Containerizing MCP Servers
- Protocol Flow
- MCP + Docker
- MCP + LangChain

MCP Crash Course: Complete Model Context Protocol in a Day

Bestseller Role Play 4.6 (3,756 ratings) 34,816 students

I'm a passionate Software Engineer with years of experience in back-end development and cloud architecture. I was one of the first engineers at Orca Security, where I helped shape the company's core technology, and today I work as a GenAI Architect at Google Cloud, helping organizations design and deploy advanced generative AI and cloud-native solutions.

I'm also proud to be a LangChain Ambassador, actively contributing to the open-source community and helping developers build powerful LLM applications using the LangChain ecosystem.

I hold a Bachelor's degree in Computer Science from the Technion, and I've always had a deep passion for teaching and mentorship. I taught Functional Programming and Introduction to Computer Science at Reichman University, where I guided the next generation of software engineers.

My courses are built on real-world experience and designed to give you practical, production-ready skills—whether you're just getting started or looking to level up.

★ 4.6 course rating • 3.8K ratings

★★★★☆ 1 month ago

Subtitles are not available in most videos. It was the most disappointing thing for a non-native speaker of English. In addition, roleplay is disabled in mobile environments with no explanations.

Goes through current state of MCP with examples. Configurational details with real applications (Claude Code) provided. I think it is a good starting point for software engineer to dig deeper. Congrats!
